The vehicle

Mekanik, Kraftstoff, Ladung

“Emma” is a Saurer collectable truck from 1967, it was property of the Swiss Army until 2005.

The mechanic and body have been perfectly maintained year after year.

It is an all-terrain vehicle built to drive on any type of fields or path.

Therefore, the stage can be used wherever without any fear of getting stuck in the mud.

In the countries, where the law permits it, the engine has been adapted to run on vegetable oil.

However, it also runs on standard diesel gas.

The actual weight of “Emma” (all inclusive) is 9 tons. It can carry 3 additional tons.

The stage

Modules

The dimensions of the top front are: 2mw + 2.70ml + 2.50mh* (Height in the center).

It provides a suitable back-stage space, large enough to be used for changing costumes or just as a chilling area for performers.

A second foldable roof, at the back, gives a larger stage volume with possibility for hanging elements or storing equipment.

The stage can be totally open or closed at the back, which allows for a better sound diffusion and wind protection.

Movements in scenic space

Many doors on 3 sides of the stage allow for entrance and exit when necessary.

A trap door gives access to the driver's cabin, which allows performers to be back on stage via the back or side doors. (See schema).

Suspension possibilities

There are wooden transversals on the ceiling to attach and hide cables, or to hang spotlights.
